

B.EL.D™ Listeria

Listeria monocytogenes is a bacterium that can cause listeriosis, a severe foodborne illness. It can be found in various food products and environments, and testing for *Listeria monocytogenes* is essential to ensure food safety and public health.

EMBIO Diagnostics has developed an innovative solution for rapid, digital, reliable diagnostics that measures electrical signals based on potentiometry. B.EL.D™ is a multi-purpose portable and easy-to-use device with up to 8 hrs use on a single charge that can be introduced to upgrade your production quality control routines and can unlock a new level of efficiency, cost effectiveness and convenience.

B.EL.D™ combines the portability of a handheld device with proprietary technology. It empowers you to perform rapid and precise *Listeria monocytogenes* detection on-site in just 24h instead of 48h.

Detect Everywhere

Our innovations contribute to increased efficiency, sustainability, and innovation in a wide range of sectors.

Manage your B.EL.D™ via smartphone, tablet or PC and
